

Your grade: 100%

Next item →

Your latest: 100% • Your highest: 100% • To pass you need at least 70%. We keep your highest score.

You increased your skill scores!

Big Data

Your score: 30 (+30) **Conversant**

Keep going! At a conversant level, you have familiarity with the vocabulary and are able to pass easy content.

Deep Learning

Your score: 66 (+15) **Beginner**

Keep going! At a beginner level, you have a working knowledge and are able to pass beginner content. You have limited experience applying it.

Show more skills

1. What is the concept that refers to data sets of massive scale, rapid generation, and diverse types that challenge traditional analysis methods like those used in relational databases?

1 / 1 point

- ☐ Deep learning
- ☐ Machine learning
- ☐ Data mining
- ☒ Big data

✔ Correct

Correct! Big data refers to data sets that are massive, quickly generated, and varied, challenging traditional analysis methods.

2. How does Generative AI contribute to addressing the challenges faced by data scientists, researchers, and analysts when exploring significant data patterns and insights?

1 / 1 point

- ☐ By replacing the role of data scientists in analyzing data patterns
- ☐ By simplifying basic data visualization tasks
- ☒ By enabling the derivation and evaluation of hypotheses from diverse data sources
- ☐ By automating the process of collecting and preprocessing data

✔ Correct

Correct! Generative AI helps bridge the gap by allowing the exploration and evaluation of multiple hypotheses from various data sources, enhancing decision-making.

3. Imagine you're working with generative AI to create new instances of data that resemble your original dataset's patterns. Which model would you choose as the foundational deep learning approach for this task?

1 / 1 point

- ☒ Generative Adversarial Networks (GANs) and Variational Autoencoders (VAEs)
- ☐ Decision Trees
- ☐ Neural Networks
- ☐ Linear Regression

✔ Correct

Correct! GANs and VAEs are the deep learning models that form the foundation of generative AI by learning patterns from extensive data and generating new instances.

4. Which technology is characterized by its ability to learn patterns on its own, such as distinguishing between objects like cats and dogs, and even generating speech that sounds like a learning baby?

1 / 1 point

- ☐ Traditional Neural Networks
- ☐ Basic Pattern Recognition
- ☒ Deep Learning
- ☐ Linear Algebra Transformations

✔ Correct

Correct! Deep learning is a technology that allows systems to learn complex patterns and features on their own, even distinguishing between objects and generating speech.

5. In the context of fintech, which machine learning application functions similarly to recommendation systems used by platforms like Netflix?

1 / 1 point

- ☒ Recommendations
- ☐ Precision and Recall
- ☐ Predictive Analytics
- ☐ Cluster Analysis

✔ Correct

Correct! Just like how Netflix suggests shows or movies based on your viewing history, machine learning is used in fintech to provide recommendations.
